E-REPAIRMANUAL

Follow the steps listed below for viewing the repair manual:

1. Open the "svgviewer" file, and run the program.
2. Click on the "main" file (if Internet Explorer is your default web browser) to view the intro page of the shop manual. If you are using an alternative web browser, you will need to right click on the "main" file and select "Open With Internet Explorer". Also, a yellow or blue security bar may appear at the top of the browser page. If so, click on the bar and click on "Allow Blocked Content".
3. Now you can select the language, and view the shop manual.

If you want to create a CD manual, make sure you include all files and folders from the extracted folder. Nero burning software works well for creating data CDs.
